

Sample Set (Gallop Rules)

- This round contains 27 problems to be solved in 60 minutes.
- Problems are divided into 9 sets of 3 problems each.
- You must submit your current set before moving onto the next one.
- Make sure to pencil in (or pen in) all answers correctly on the answer sheet as you will be unable to return to a set once you have turned it in!
- Point values for each set:

Round #	1	2	3	4	5	6	7	8	9	Total Pts.
Pts/Problem	10	11	12	13	14	16	18	21	25	420

Gallop Stallion Round Set 1

1. [10] What is $20 + 25 + 20 \cdot 25 + 20 - 24 + 2025$?
2. [10] Right trapezoid $ABCD$ has a height of 6, and the parallel sides have lengths 6 and 14. What is the length of the last side?
3. [10] Consider an integer N that is formed by the first 100 positive integers in a row (as shown below). How many times in N does the string 19 appear?

$$N = 123456789101112\dots$$

Gallop Stallion Round Set 4

10. [13] Benjamin has gotten the following scores on the 25 question MMMA10 (Mustang Math Mock AMC10): 67.5, 90, 100.5, 106.5. Mustang Math grants an honor of “Extremely and Highly Distinguished Honor Roll” to people who average over a score of 100 over the course of at least 5 years. What is the minimum number of questions correct Benjamin can get on his next MMMA10 if he wants to get “Extremely and Highly Distinguished Honor Roll?” Note that correct answers are worth 6 points, incorrect 0 points, and blank 1.5 points.
11. [13] Alan likes to listen to music, so he brings his wireless earbuds to school every day. However, the earbuds are very small and easy to misplace, so Alan has a 25% chance of losing his earbuds every day at school. What is the probability that Alan still has his earbuds by the end of a school week (5 days)? Give your answer as a simplified fraction.
12. [13] What is the sum of the solutions to $\sqrt{x^2 + 6x + 9} = 3.1415$?

10. [13] Benjamin has gotten the following scores on the 25 question MMMA10 (Mustang Math Mock AMC10): 67.5, 90, 100.5, 106.5. Mustang Math grants an honor of “Extremely and Highly Distinguished Honor Roll” to people who average over a score of 100 over the course of at least 5 years. What is the minimum number of questions correct Benjamin can get on his next MMMA10 if he wants to get “Extremely and Highly Distinguished Honor Roll?” Note that correct answers are worth 6 points, incorrect 0 points, and blank 1.5 points.
11. [13] Alan likes to listen to music, so he brings his wireless earbuds to school every day. However, the earbuds are very small and easy to misplace, so Alan has a 25% chance of losing his earbuds every day at school. What is the probability that Alan still has his earbuds by the end of a school week (5 days)? Give your answer as a simplified fraction.
12. [13] What is the sum of the solutions to $\sqrt{x^2 + 6x + 9} = 3.1415$?

Gallop Stallion Round Set 5

13. [14] What is the greatest integer less than $\sqrt{28} + \sqrt{45}$?
14. [14] Billy started his Spanish learning streak on Duolingo on November 24, 2024, a Sunday. If he studies every day, when will he reach his 100 day streak? Give your answer in the form of MM/DD, including leading zeros if necessary.
15. [14] Find the number of positive integers n less than 200 such that the greatest common divisor of n and 60 is 6.

Gallop Stallion Round Set 6

16. [16] Pablo Panther and Roger Rabbit are playing a game with coins. Pablo starts with n coins, where $1 < n < 1000$. On Pablo's turn, if Pablo has an odd number of coins, his coins are tripled, and Roger gives him 1 extra coin on top of his earnings. However, if Pablo has an even number of coins, he loses half of his coins. Let $f(x)$ represent the number of coins Pablo has after x moves. Find the value of $f(15411) + f(15412) + f(15413)$.
17. [16] If a , b , and c are positive digits with a sum ≤ 10 , what is the positive four-digit integer $\overline{a0bc}$ that is equal to the product of the sum of its digits and $\overline{abc}$?
18. [16] X and Y are two points that are 6 units apart. Point Z lies on line $\overline{XY}$ such that $\overline{XZ} = 2\overline{YZ}$. What is the sum of all the possible values of $\overline{XZ}$?

Gallop Stallion Round Set 8

22. [21] Sohum randomly selects three real numbers x, y, z in the interval $[0, 1]$. What is the probability that x, y, z form the sides of a triangle?
23. [21] Triangle ABC has $AB = 13$ and $BC = 15$. Point D lies on side AC such that $AD = 10$ and $BD = 13$. What is CD ?
24. [21] Upon taking an ancestry test, Bob discovered that he is exactly $\frac{1}{12}$ Mustanganian! Bob also found out that in his infinite ancestry, all of the females are 0% Mustanganian. If he goes back just 100 generations, how many of his ancestors will he find that are 100% Mustanganian? Note that going back 3 generations would mean Bob's parents, grandparents, and the great-grandparents.

Gallop Stallion Round Set 9

25. [25] Isosceles trapezoid $ABCD$ has parallel bases $\overline{AB}$ and $\overline{CD}$ with $AB = 2$ and $CD = 4$. Suppose that the line through point C and the midpoint of $\overline{BD}$ is perpendicular to $\overline{AD}$. Find the area of $ABCD$.

26. [25] How many functions $\{1, 2, 3, 4\} \Rightarrow \{1, 2, 3, 4\}$ satisfy $2f(x) \geq x + f(f(x))$ for all x .
27. [25] On a circle with diameter $AB = 2r$, where r is an integer, chords parallel to AB have lengths $2r - 2$ and $2r - 4$. Find the sum of the two smallest values of r such that the distance between each pair of chords (including AB) is an integer.
